

Feast With Us

GreenFeast® North

A highly stress adaptable maize mix which is an alternative to forage sorghum.

- Plant early with Extreme cold tolerance
- High quality whole crop silage or grazing
- High Stress adaptability
- Large cold tolerant seed.
- Better feed quality than forage sorghum
- Cost effective seed
- Single crop silage or single graze, it doesn't re-grow

Putting our cob on your block - we are seriously committed

HSR puts its cob on the block for farmers; we live by our commitment to deliver adaptable & reliable hybrids.

Testimonials

Tim Chapman (pictured with son Finlay) who farm with their family at KINGAROY:

"Nothing performs under stress better than the HSR varieties, we moved from forage sorghum to GreenFeast® for whole crop dryland silage and won't go back to forage sorghum. It's highly cost effective. And on higher risk dryland ground makes real sense. Last summer dryland GreenFeast® yielded 30 MT / ha as silage and was much better high energy silage quality than forage sorghum."

Pat McConville at WARWICK (crop pictured left with Neil Doyle):

"I was very happy with GreenFeast®, which produced excellent silage under tough conditions with much higher feed quality than forage sorghum."

Jeff Fitch at YARRAMAN:

"GreenFeast® has done a much better job than forage sorghum and has much better silage quality, I won't be going back to sorghum."

Roger Blanch at FELTON:

"GreenFeast® has produced excellent whole crop silage under extreme stress, had a great yield and very high quality silage."
